Subject: Lancaster Local Plan Mineral Safeguarding Issues

Kim,

I have had confirmation from the Company Head of Geology Simon Collins that the proposed South Carnforth residential development is within a mineral safeguarding area which ultimately may be worked in the longterm for limestone as well as any overlying sand and gravel.

Regards,

Geoff

Geoff

The area outlined in red and blue to the west of back lane is underlain by Urswick Limestone (see attached extract from the BGS website). This is the same high quality limestone worked at Back Lane quarry, Leapers wood quarry Dunald mill quarry and several other existing and closed quarries in the area.

Regards

Simon
